

TASK1

At first, I logged into Tawk.to. Now, I am creating a property.

The screenshot shows the Tawk.to interface during property creation. On the left is a sidebar with navigation options: Shopngrab (1), Groups (+ New Group), Direct Messages (1), and a 'Getting Started' section with a progress bar at 31%. The progress bar lists steps: 1. Signed Up (checked), 2. Create a Property (checked), 3. Invite Members (unchecked), 4. Dashboard Tour (checked), 5. Watch Demo (unchecked), 6. Customize Widget (checked), 7. Create a Shortcut (unchecked), and 8. Check out Inbox (unchecked). The main content area is titled 'Enter Property Details' and features a progress indicator with step 1 highlighted. It contains two input fields: 'Property Name' with the value 'shopngrab' and 'Site URL' with the value 'https://shopngrab.onrender.com/'. At the bottom right are 'Cancel' and 'Next' buttons.

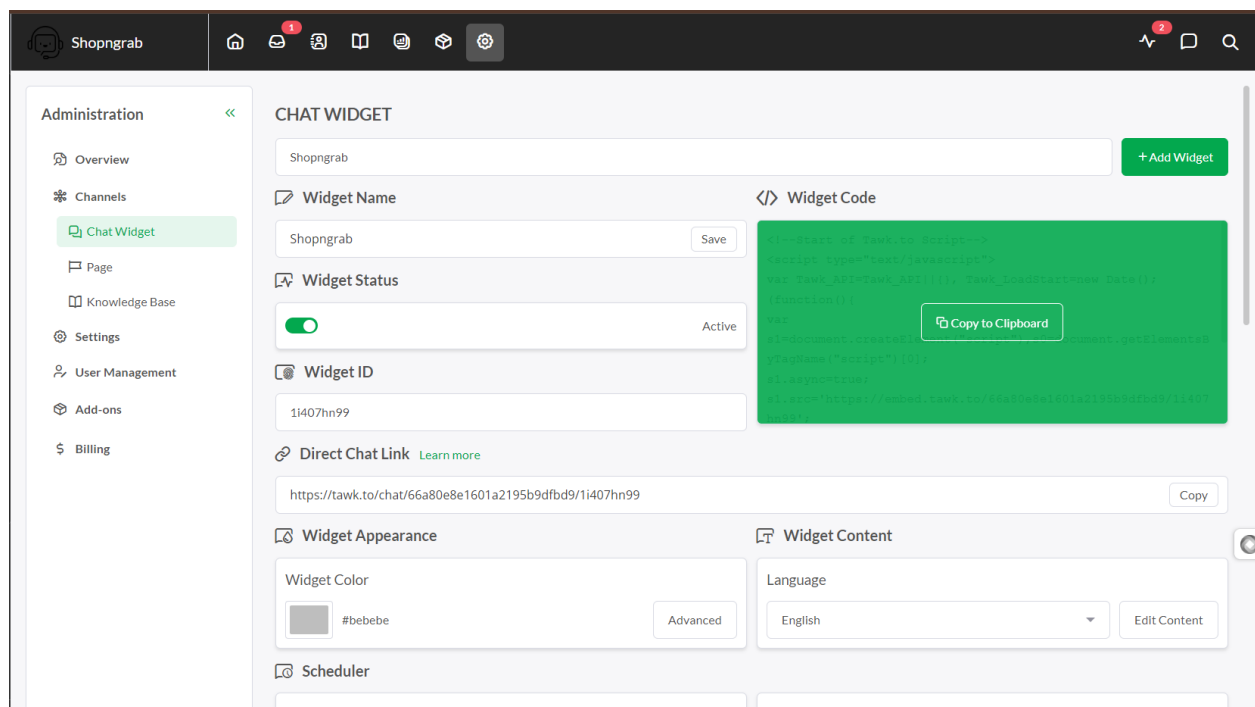

To install this widget, I have to use this code in my react project

The screenshot shows the 'Install Widget' screen in the Tawk.to interface. The sidebar is identical to the previous screen. The main content area has a progress indicator with step 2 highlighted. It is titled 'Install Widget' and includes instructions: 'To install tawk.to, you can place this code before the </body> tag on every page of your website.' Below this is a green code block containing JavaScript code for a script tag. A 'Copy to Clipboard' button is next to the code. Below the code block, there is a section for plugins with a dropdown menu set to 'WordPress' and a download icon. At the bottom, there is a section for sending instructions to a developer with a text input field and a send button. A 'Done' button is located at the bottom right.

I have modified my index.html by updating it with the code provided by Tawk.to.

```
29 <script src="https://cdn.jsdelivr.net/npm/bootstrap@5.1.3/dist/js/bootstrap.bundle.min.js"></script>
30 <script src="https://kit.fontawesome.com/d57df93bde.js"></script>
31 <div id="root"></div>
32 <!-- Tawk.to script -->
33 <!--Start of Tawk.to Script-->
34 <script type="text/javascript">
35   var Tawk_API=Tawk_API||{}, Tawk_LoadStart=new Date();
36   (function(){
37     var s1=document.createElement("script"),s0=document.getElementsByTagName("script")[0];
38     s1.async=true;
39     s1.src='https://embed.tawk.to/66a80e8e1601a2195b9dfbd9/1i407hn99';
40     s1.charset='UTF-8';
41     s1.setAttribute('crossorigin','*');
42     s0.parentNode.insertBefore(s1,s0);
43   })();
44 </script>
45 <!--End of Tawk.to Script-->
46 </body>
47 </html>
48
```

In the chat widget I have given the widget color

Here I have uploaded image for my property , I can see this image as my chat assistant logo
